SemsoTec certified according to ISO 14001:2015

Independent confirmation for efficient environmental management

The SemsoTec Group and its employees are officially pleased about the independent confirmation for efficient environmental management according to ISO 14001:2015.

With this successful certification, SemsoTec underlines its claim to sustainably optimise and efficiently design its use of energy and resources.

SemsoTec's environmental management comprises the planning, control, monitoring and improvement of all operational measures to protect the environment. The goals and requirements include the introduction of a multi-stage waste hierarchy system and the continuous reduction of energy consumption.

Together with the ISO 9001 quality seal, ISO 14001 certification is a supporting pillar of an integrated management system as well as an important basis for a trusting partnership with suppliers and customers.

The SemsoTec Group covers the entire value chain for infotainment displays and control units - from prototypes to series production. In addition, another area of expertise is the development and realization of interior & body concepts.

Innovative technologies are individually manufactured and provided according to the wishes and needs of our customers.

In the field of Display & Infotainment SemsoTec offers specific know-how, electronic design and developments specifically designed for the physical characteristics of LCD TFT displays as well as state-of-the-art technologies such as touch, handwriting recognition, foil lamination and optical bonding. These technologies are key factors for high performance levels in demanding areas such as applications that can be read despite strong sunlight. We are specialists in high-quality displays with embedded software and hardware solutions for automotive and industrial applications.

Among other things, our focus is on display-based system solutions with their respective HMI operating concepts, where quality and safety as well as innovative technology and "Made in Germany" are of utmost importance to SemsoTec.

The Interior & Body division has set itself the goal of making mobility faster, lighter and more dynamic. Engineering covers the areas of lightweight vehicle construction, structures and vehicle dynamics.
